LAB OBSERVATION

EXPERIMENT-2

2) Design a user interface prototype for a mobile station using Figma, considering connectivity and convenience.

Answer)

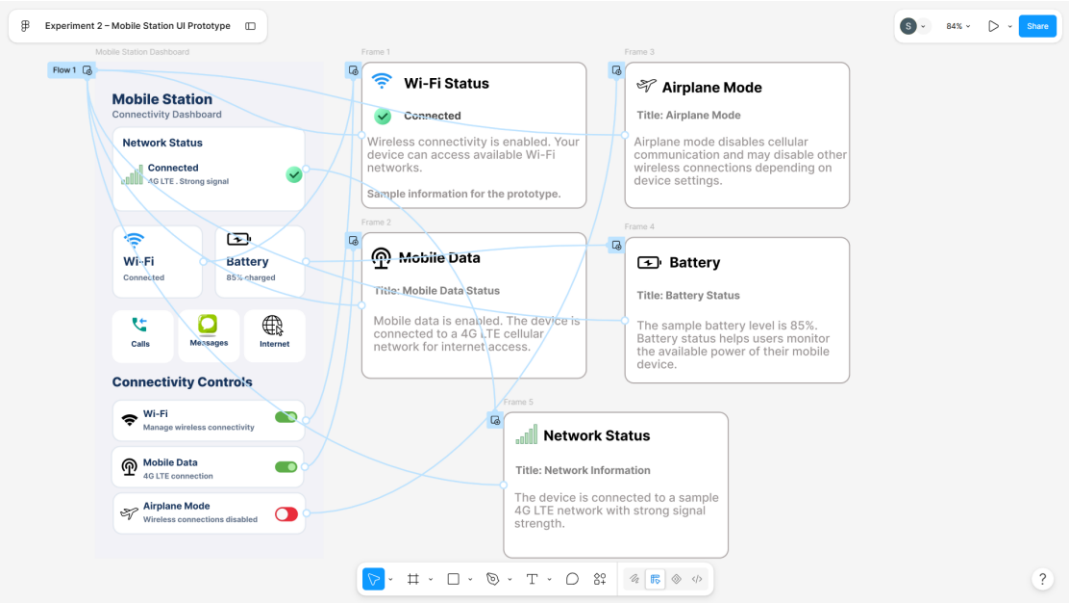

Aim:

To create a user interface prototype for a mobile station using Figma, considering connectivity and convenience.

Procedure / Algorithm:

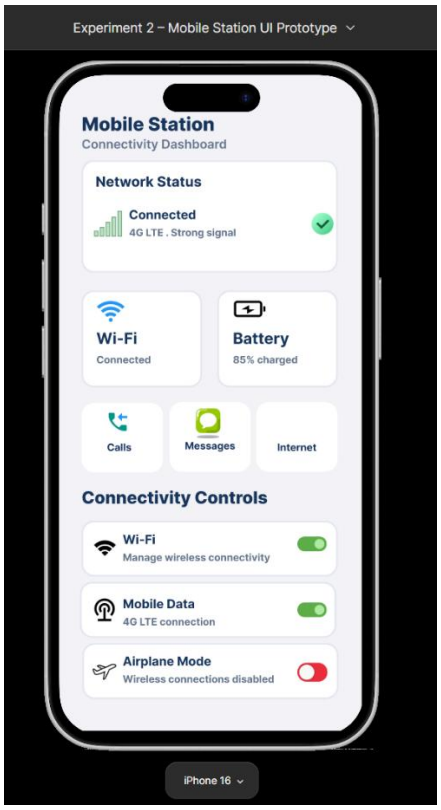

1. Open Figma and create a new design file.
2. Create a mobile frame using a suitable phone preset.
3. Design the Mobile Station Dashboard with an appropriate background and heading.
4. Add a Network Status card displaying connectivity and signal strength.
5. Create Wi-Fi and Battery cards displaying connectivity status and battery level.
6. Add Quick Access cards for Calls, Messages, and Internet.
7. Design Connectivity Controls for Wi-Fi, Mobile Data, and Airplane Mode.
8. Create information overlays for the relevant connectivity features.
9. Use Prototype mode to connect the interface elements to their corresponding overlays.
10. Preview the prototype and verify the available interactions.
11. Save the completed design.

Implementation:

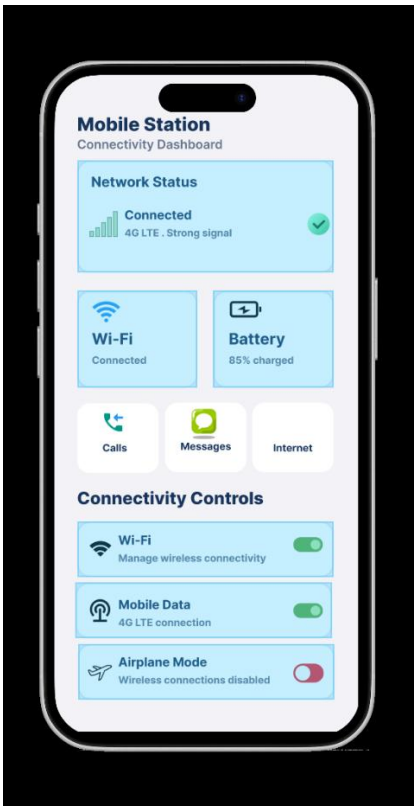

Output:

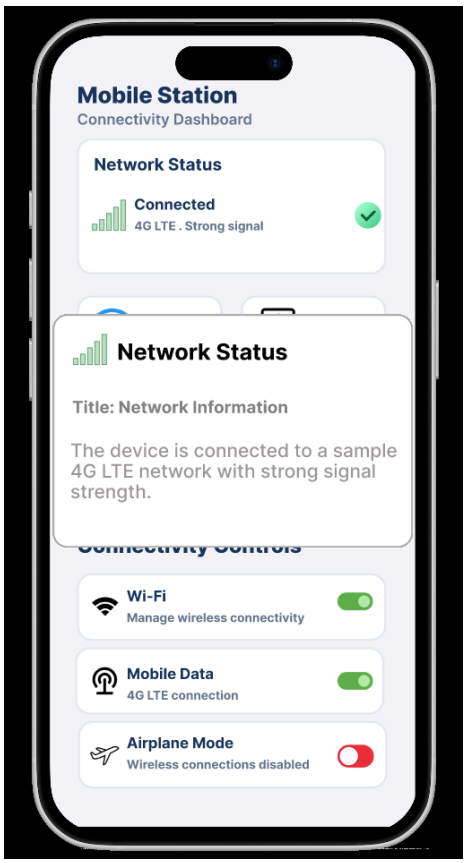

Output 1: Mobile Station Dashboard

Output 2: Connectivity Controls

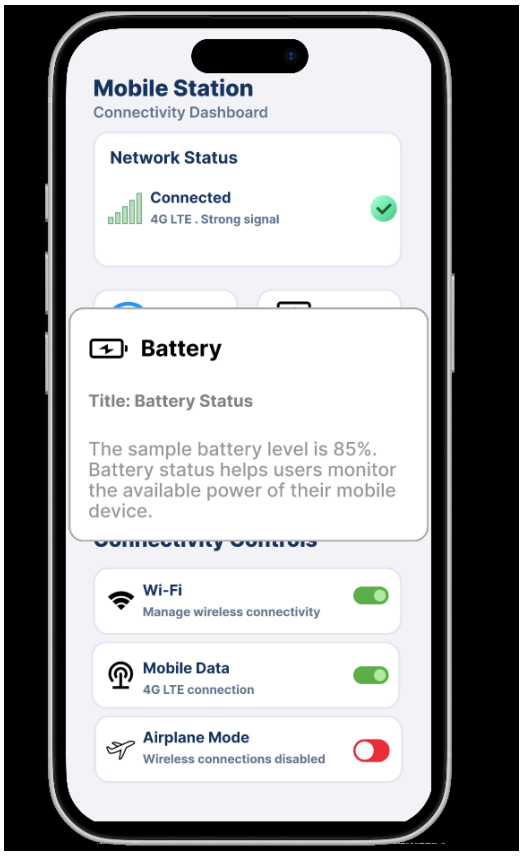

Output 3: Network Status Overlay

Output 4: Wi-Fi Status Overlay

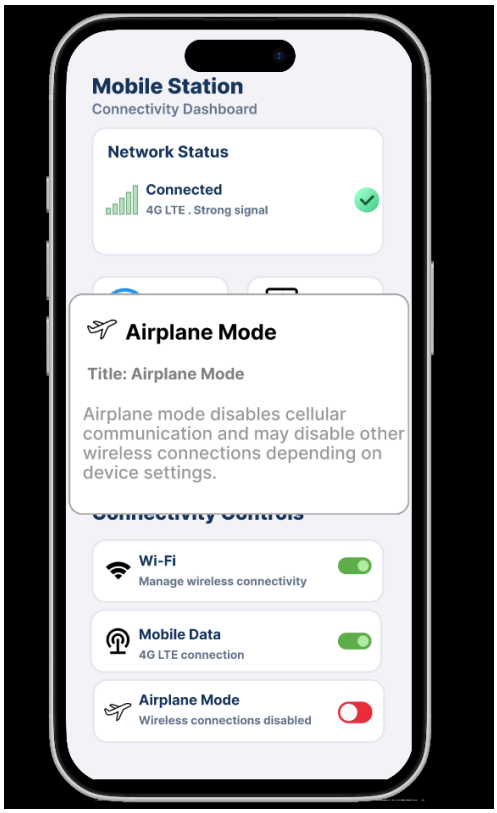

Output 5: Battery Status Overlay

Output 6: Mobile Data Status Overlay

Output 7: Airplane Mode Status Overlay

Result:

Hence, a user interface prototype for a mobile station, considering connectivity and convenience, was designed successfully using Figma.
