LAB OBSERVATION

EXPERIMENT-5

5) Design a wireframe for a mobile application that incorporates localization features using Figma

Answer)

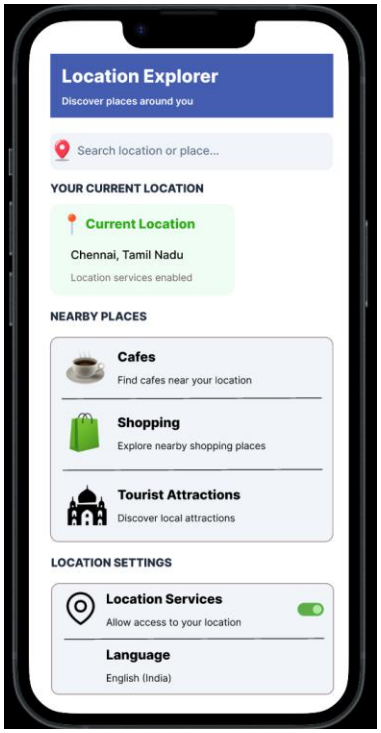

Aim:

To design a wireframe using Figma for a mobile application that incorporates localization features.

Procedure / Algorithm:

1. Open Figma and create a new design file.
2. Select a mobile frame for the application.
3. Design the app header and location search bar.
4. Add a section to display the current location.
5. Create cards to display nearby places.
6. Add location services and language settings.
7. Arrange the elements using suitable colors, icons, and fonts.
8. Review the wireframe and make necessary changes.
9. Save the design file.

Output:

Result:

The mobile application wireframe incorporating localization features was successfully designed using Figma.
